REVERSA

REVERSA

Self-Healing AI Operations Platform

- AI that does not just act. It makes things right.
- Vultr Agent Rush 2026 - Challenge 2: Powering the Future of Work.

REVERSA

The problem

Who fixes the mess?

- AI agents execute real operations across business systems.
- When step 6 of 10 fails: half-created accounts, orphaned
- resources, inconsistent systems, hours of manual cleanup.

REVERSA

The solution

A recovery engine for AI operations

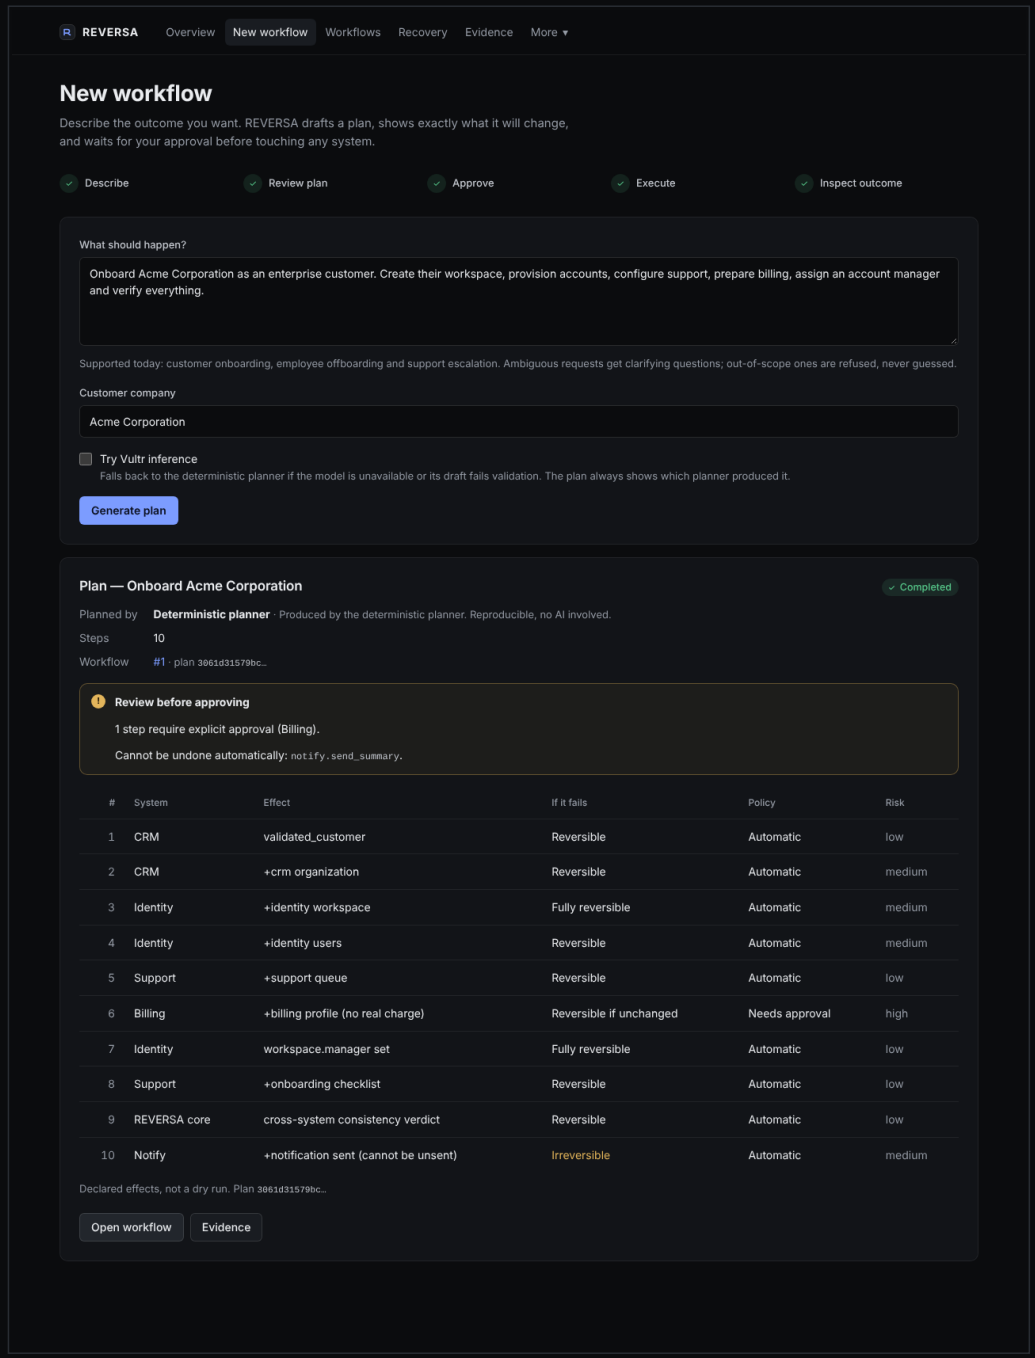

- AI Planning + Verified Execution + Typed Compensation
- + State Reconciliation + Evidence.
- Reversible where possible. Accountable everywhere.

REVERSA

Live: plan

Intent to approved plan

- Natural language becomes a strict, policy-checked plan.
- Shadow Preview shows effects, risks and approvals.

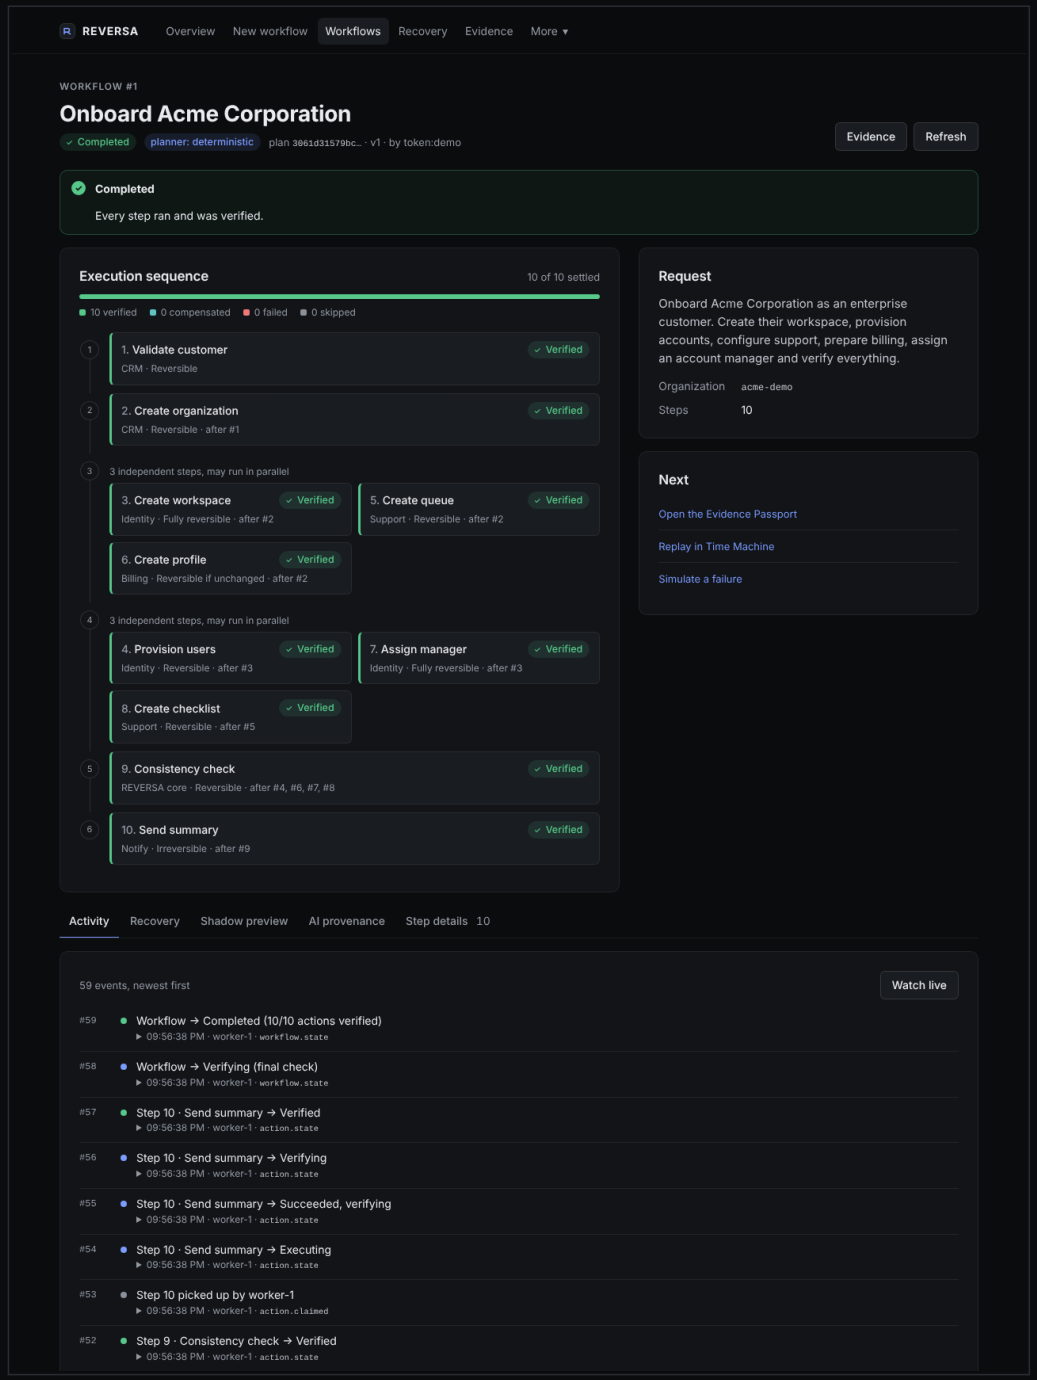

REVERSA

Live: execution

10 actions, 10 verified

- Real calls across CRM, Identity, Support, Billing, Notify.
- Every effect re-checked. Live graph and timeline.

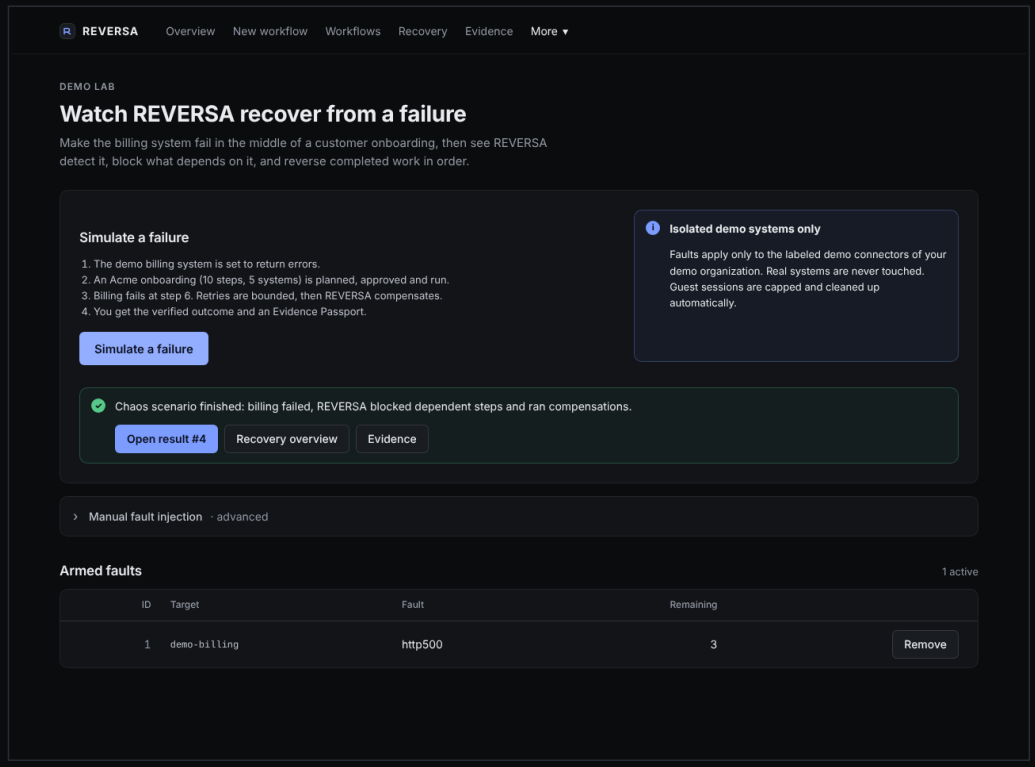

REVERSA

Chaos

Billing dies mid-run

- One click injects a real outage in the isolated demo tenant.
- Detection is instant. Dependents block.

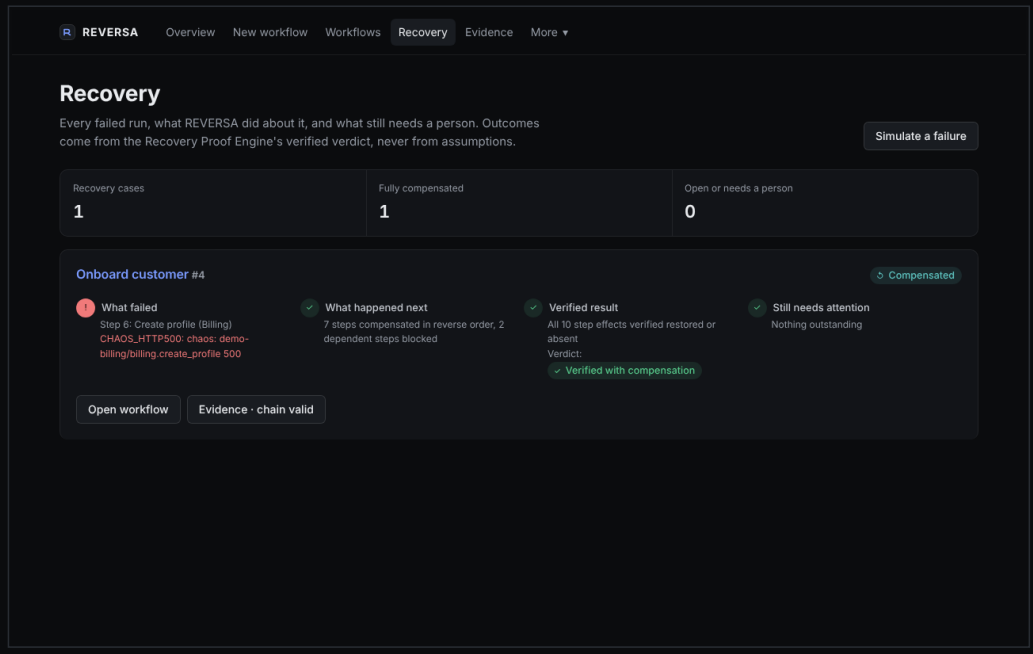

REVERSA

Self-healing

Reverse-order compensation

- 7 completed actions undone and verified absent.
- Irreversible steps surface as explicit manual items.

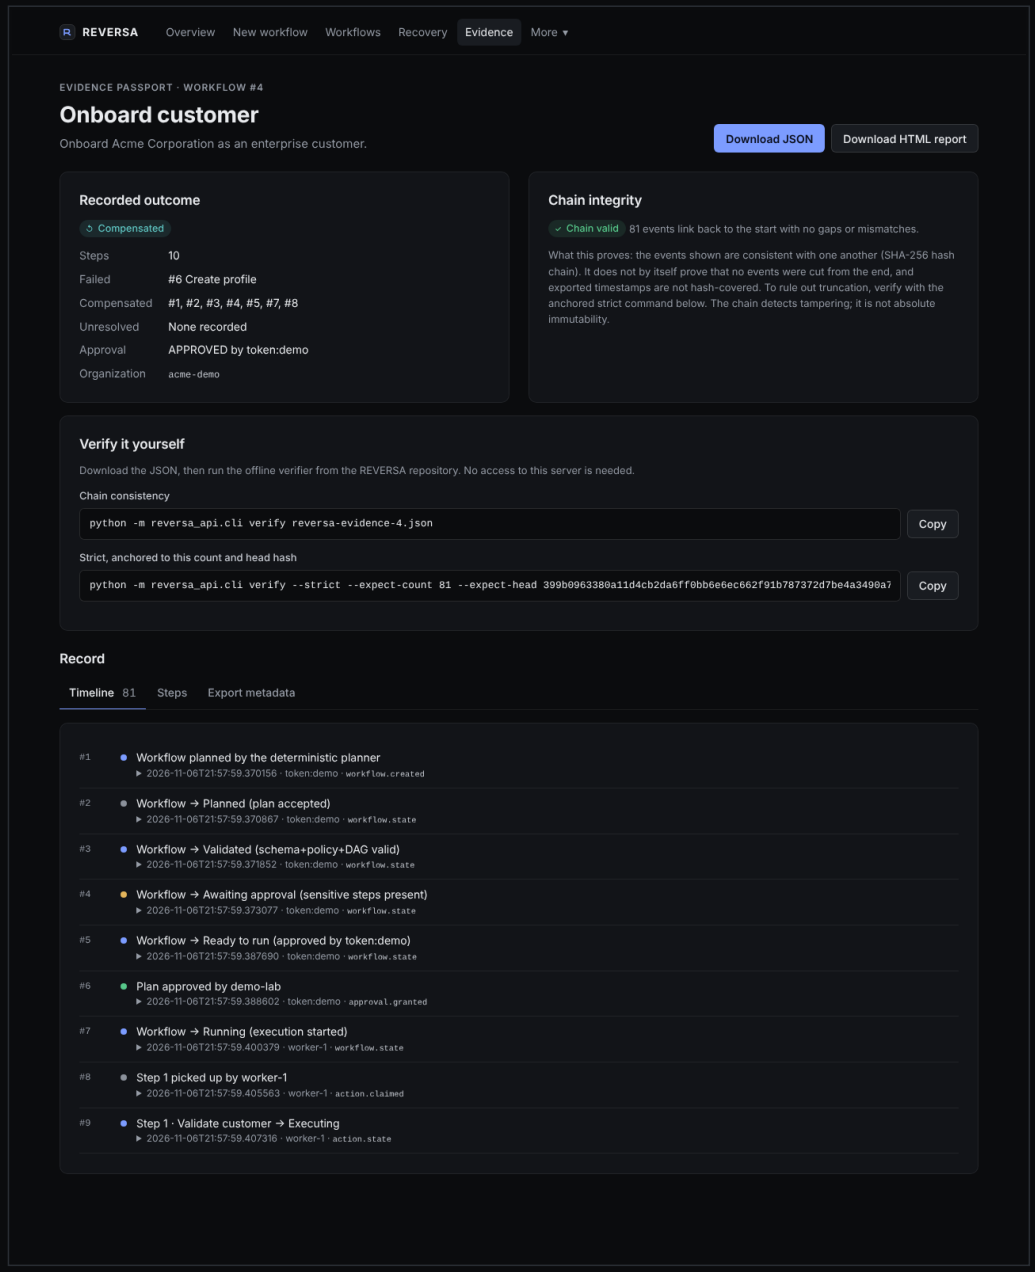

REVERSA

Evidence

Every run sealed

- Hash-chained timeline, JSON/HTML export, offline CLI verify.
- 59 events per happy run. No claim without proof.

REVERSA

Architecture & numbers

100% on Vultr

- 1 VM (2 vCPU / 4 GB, Paris): Caddy TLS + API + web + Postgres.
- Measured: happy P50 505 ms, chaos P50 1.78 s, recovery 100%.
- Spend: under $3 for the whole event.

REVERSA

Business & close

Sell the cleanup nobody wants

- Wedge: teams drowning in automation recovery cost.
- Land with the 30-second demo. Hypotheses, no fake ROI.
- REVERSA. Reversible where possible. Accountable everywhere.
